CLAIMS:

1. A tamper evident assembly for use with a fluid dispensing container for flowable material, the assembly comprising:

an annular flange for attachment to a container,

5 a spout projecting upwardly from the flange and having an upper end and a lower end, the spout defining a dispensing passage therethrough and having at least one external annular rib; and

10 a cap having a top with an external depending skirt and a tamper indicating band releasably attached to the skirt, the cap further including an internal skirt depending from the top and spaced inwardly from the external skirt and operable to be received within the fluid passage to provide a seal between the cap and the spout;

the assembly having a first position in which the cap is received on the upper end of the spout with the tamper indicating band abutting the external rib and the internal skirt being received within the passage and providing a seal therebetween; and a second position in which the cap is located on the lower end of the spout with the external rib located between the external skirt and the tamper indicating band and the upper end of the spout located adjacent the top of the cap, the internal skirt being received within the passage and providing a seal therebetween.

2. A tamper evident assembly for use with a fluid dispensing container for flowable material, the assembly comprising:

an annular flange for attachment to a container,

25 a spout projecting upwardly from the flange and having an upper end and a lower end, the spout defining a dispensing passage therethrough; and

- 14 -

a cap sized to be received on the spout and having a tamper indicating band releasably attached thereto,

5 the assembly having a first position in which the cap and the tamper indicating band are received on the upper end of the spout and a seal is provided between the cap and the spout and from which when the cap is removed the tamper indicating band remains attached to the cap, and a second position in which the cap and the tamper indicating band are located adjacent the lower end of the spout and a seal is provided between the cap and the spout and from which when the cap
10 is removed the tamper indicating band detaches from the cap and remains on the spout, thereby providing evidence of tampering.

3. A tamper evident closure and dispensing assembly for use with a container for flowable material, the closure comprising a cap and a spout secured to the container, the cap having a frangible tamper
15 evident band associated with it, the cap having an annular recess for frictionally engaging a top portion of the spout, the cap and spout having cooperating detent and locking elements to allow the assembly, when secured to a container to move from a first position where the cap is removably sealed to the spout and the tamper evident band is
20 not broken when the cap is removed for filling, to a second position when the cap is removably sealed to the spout and the tamper evident band is broken upon removal of the cap to dispense flowable material.

4. A tamper evident closure and dispensing assembly according to claim
25 3, wherein the cap includes an internal skirt depending from a top portion of the cap and spaced inwardly from the cap sidewall, the frangible tamper evident band depends from the lower edge of the cap sidewall and the area between the sidewall and the internal skirt forms the annular recess in the cap and includes a lower and an upper detent that determine the pre-cap and full cap positions, respectively for the

- 15 -

top portion of the spout that is sealingly and frictionally engaged within the annular recess of the cap when the assembly is in use.

5. A tamper evident closure and dispensing assembly according to claim 4, wherein the cap includes a locking ring that cooperatively engages an annular projection located on an inner edge of the tamper evident band in the pre-cap position and in the full cap position the annular projection located on an inner edge of the tamper evident band is engaged beneath the locking ring, whereby in the pre-cap position the frangible tamper evident band is not broken upon removal of the cap, but in the full cap position, the frangible tamper evident band must be broken to remove the cap.
